

Kodak Info Input Solution v4 Outstanding Document Capture Solution

The logo for Kodak Alaris, featuring the word "Kodak" in red and "alaris" in white, set against a black rectangular background.

Info Input Solution v4, from Kodak Alaris, has been honored with a prestigious Pick award as “Outstanding Document Capture Solution” from the analysts at Buyers Lab (BLI) thanks to its...

- Browser-based “thin-client” applet allows users to capture documents at the point of origin
- Easy-to-master UI that enables knowledge workers to get up and running quickly
- Productivity enhancing usability features including Form Types, Samples Jobs, scan profiles and preset workflows speed capture chores
- Wide range of scalable processing abilities that enable flexible workflows
- Optional mobile app that lets documents be captured, indexed and uploaded from anywhere via compatible iOS and Android devices

Typically, paper-intensive organizations maintain a centralized scanning department, with dedicated scan operators running desktop applications to handle capture and indexing chores. That model works if documents that need to be captured all come to that central location as a matter of course, but it’s less ideal in multi-location scenarios (such as branch offices), where the common occurrence is to package up critical paper documents and courier them to HQ for scanning. Info Input Solution can greatly improve this inefficient process. The secret lies in the solution’s client/server architecture, where documents are captured and indexed locally via a low-overhead browser-based client applet, then uploaded to a central server (or servers) for processing and delivery to their ultimate destination.

“Info Input Solution is an impressive document capture solution that should have organizations rethink how—and where—they capture documents,” said Jamie Bsales, Director, Office Workflow Solutions Analysis at BLI. “Customers can maintain a dis-

tributed capture environment, where documents are captured by knowledge workers at the point of entry. And with the easy-to-master Info Input client, users don't have to be experienced scan operators. The UI is intuitive enough that any employee that handles documents can be trained to capture and index as part of their daily functions."

About **BLI Pick Awards**

With its annual document imaging solutions Pick awards, BLI gives special recognition to the software products that provided the most outstanding performances in BLI's unique evaluations. Software products submitted for testing undergo an in-depth hands-on review that focuses on key attributes for a solution's target market and compares how well the product stacks up against leading competitors. Pick winners rise above the competition in key areas such as feature set, ease of use, ease of administration, software integration, and value. Consequently, a BLI Pick is a hard-earned award that buyers and IT directors can trust to better guide them in their acquisition decisions.
